

DM7 Series

OSC Specifications

Version 1.0.0

OSC (Open Sound Control) is a protocol for transmitting control information of electronic musical instruments / audio equipment, etc. via a network. This protocol can be used to remotely control the DM7 series. This document describes the connection and setup procedure for remote control using this protocol and lists the necessary parameter information.

1. Setup

1.1. Connection Procedure

Connect the remote controller to the network terminal of each device as shown below. The device to be controlled is specified by its IP address. Connect DM7 Series to the Network PC terminal (computer connection terminal for external control) via the Network port on the rear panel. Up to four OSC remote controllers can be connected to one DM7 Series console.

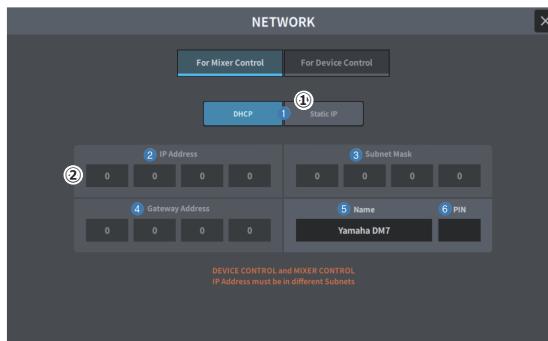

1.2. DM7 Series Configuration

IP address setting:

Uses the same IP address as Editor and StageMix.

Open the NETWORK window from SETUP in the menubar, and select "For Mixer Control".

1) Select "Static IP".

2) Specify the IP address and subnet mask.

1.3. Configuring the Remote Controller

DM7 series can be controlled from an external device via Ethernet (NETWORK terminal).

The settings on the remote controller side for each connection are as follows -

IP Address: Specify the IP address of For Mixer Control of the DM7 Series to be controlled.

IP Port No.: UDP 49900

1.4. Configuration Examples

Below are several example commands set using an OSC Controller, in this case with the QLab application. QLab does not require type tags to be added to the command. A type tag may be required depending on the OSC Controller application, please check this for the OSC controller to be used.

1.4.1. Parameter setting examples

Set the fader level of input channel 1 to -∞

Category	Parameter Description	<Action>	<OSC address>	<X>	X name	<Y> range	Y name	<type tag>	type tag	<value>		value		comment
										min	max	scaling	unit	
Input Channel	Fader Level	set	MIXER:Current/InCh/Fader/Level	1 - Input Channel Num	Input Channel	1	-	i:	integer	-32768	1000	100	dB	See Table 1

Format: /yosc:req<Action><OSC address><X>/<Y> <value>

Command: /yosc:req/set/MIXER:Current/InCh/Fader/Level/1/1 -32768

Set the channel color of MIX channel 1 to pink

Category	Parameter Description	<Action>	<OSC address>	<X>	X name	<Y> range	Y name	<type tag>	type tag	<value>		value		comment
										min	max	scaling	unit	
Mix Channel	Label Color	set	MIXER:Current/Mix/Label/Color	1 - Mix Channel Num	Mix Channel	1	-	s:	string					See Table 3

Format: /yosc:req<Action><OSC address><X>/<Y> <value>

Command: /yosc:req/set/MIXER:Current/Mix/Label/Color/1/1 Pink

* The “ ” in <Value> is not required in QLab.

1.4.2. Snapshot setting example

Recall SCENE 05

Category	Parameter Description	<Action>	<OSC address>	<type tag>	type tag	<value>		value		comment
						min	max	scaling	unit	
Scene	Recall Scene_A	ssrecall_ex	scene_a	s:, i:	string,integer	0	499	-	-	

Format: /yosc:req<Action> <OSC address> <value>

Command: /yosc:req/ssrecall_ex scene_a "5"

* Use "scene_a" when using the DM7 series in the Default mode. When in the Split mode, use "scene_a" for side A side and "scene_b" for side B.
